

Patent claims

1. Method for displaying calibration-required data by means of an industry visualization system (4) which is planned with a predetermined project planning software and has a standard interface for incorporating further applications, with the calibration-required data being transmitted with its integrity safeguarded to the visualization system (4) and in the visualization system (4) being visualized via an application linked in via the standard interface in a different form from the presentation options which can be planned via the project planning software.
- 5
- 10
- 15
2. Method in accordance with claim 1, characterized in that the calibration-required data is transmitted encrypted and decrypted in the visualization system (4) via the application linked in via the standard interface.
3. Method in accordance with claim 2, characterized in that the calibration-required data is encrypted with a private key and decrypted with the same private key.
4. Method in accordance with one of the previous claims,
- 20
- characterized in that the calibration-required data is visualized in a display area of the visualization system (4) not accessible to the project planning software.
5. Method in accordance with one of the previous claims,
- 25
- characterized in that the calibration-required data is visualized together with additional information (8) that cannot be planned by the project planning software.
